MAKING THE PAPER LOG CASE

1 Remove the Inner Plunger

2 Lay an open sheet of newspaper on a table close to the edge, for large papers fold once.

3 Place outer tube onto paper with flange overhanging the table and align long edge of paper with the arrows

4 <u>Loosely</u> roll paper around the tube

5 Tuck the loose end of the paper well into the tube

6 Stand tube upright on a firm flat surface (flange uppermost) and compress the tucked in paper with the plunger

INSERTING THE WASTE

7 Remove plunger and insert a small amount of waste – replace plunger and compress waste

8 Repeat insertion of waste and compressing until disk level is visible when compressed – first disk for short Logs and second disk for long logs.

Note: DO NOT OVERFILL BEYOND SECOND DISK LEVEL

EJECTING THE LOG

9 Whilst gripping the flanged end of the outer tube slowly push the plunger to eject the paper casing and the contents.

SEALING THE LOG

Method 1
Grip open loose end of Log and whilst cupping other end twist loose end and compress log contents to seal Log.

Method 2
Stand Log upright and fold the side of the open end inwards (compressing the log contents) then roll up the remaining loose end downwards

YOUR LOG IS NOW READY FOR BURNING!
